

Asian markets for bio-based chemical building blocks and polymers

Share of Asian production capacity on global production by polymer in 2016

Author: Wolfgang Baltus, Wobalt Expedition Consultancy, Thailand

This and other reports on the bio-based economy are available at www.bio-based.eu/reports

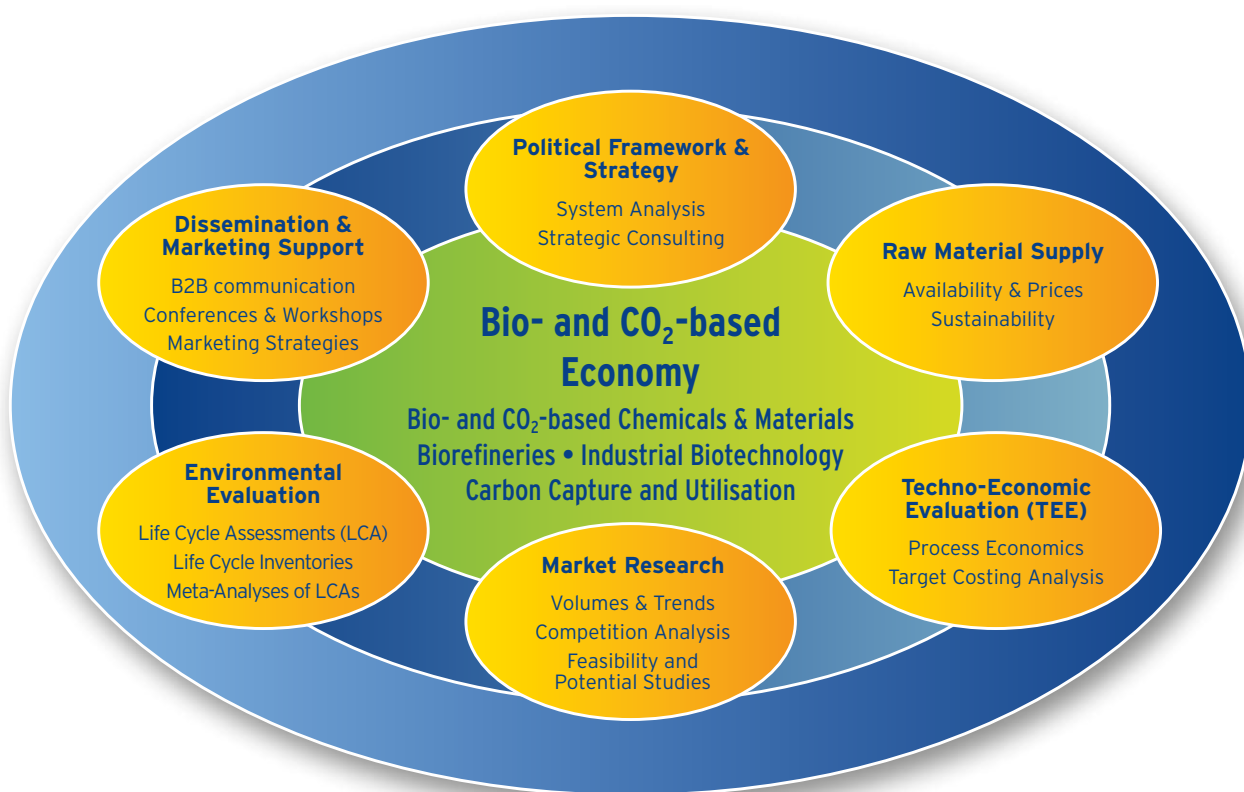

Author

Wolfgang Baltus (PhD) (Thailand) worked for BASF for 15 years and was responsible for the business development of environmental friendly coatings in Asia. From 2008 until 2015, Baltus worked for the National Innovation Agency (NIA) and for Precise Corporation in Bangkok. In 2016, he founded his own independent consultancy, Wobalt Expedition Consultancy. He is regarded as one of the leading experts on bio-based polymer markets and policy in Asia.

The author is part of nova-Institute's bio-based expert group. More reports of expert group members are available at www.bio-based.eu/reports

Free papers and all services of nova-Institute are available at www.bio-based.eu

nova-Institute

The nova-Institut GmbH was founded as a private and independent institute in 1994. It is located in the Chemical Park Knapsack in Huerth, which lies at the heart of the chemical industry around Cologne (Germany).

For the last two decades, nova-Institute has been globally active in feedstock supply, techno-economic and environmental evaluation, market research, dissemination, project management and policy for a sustainable bio-based economy.

Asian markets for bio-based chemical building blocks and polymers

Wolfgang Baltus,

Wobalt Expedition Consultancy, Thailand

1	Introduction	4
2	Asian markets for bio-based polymers	5
2.1	Asian markets for bio-based chemical building blocks	13
2.2	Biorefineries in Asia.....	16
3	Asia-Pacific region in numbers	20
4	Feedstock – Key to success in Asia-Pacific	22
4.1	Sugarcane – <i>Saccharum officinarum</i> L.....	25
4.2	Sugar beet – <i>Beta vulgaris</i>	27
4.3	Cassava – <i>Manihot esculenta</i>	27
4.4	Corn (maize) – <i>Zhea mays</i>	29
4.5	Other feedstock	30
4.5.1	Castor plant – <i>Ricinus communis</i>	30
4.5.2	Palm oil – <i>Elaeis guineensis</i> and related	30
4.5.3	Rice straw – <i>Oryza sativa</i>	33
4.5.4	Napier Grass – <i>Pennisetum purpureum</i>	33
4.5.5	Rubber tree – HEVEA spec.....	34
4.6	Threats	35
5	Policy development	35
5.1	Stimulation of investment	35
5.2	End-of-life policy	36
5.3	Biorefinery policy support	37
6	Market growth factors	37
6.1	Environmental factors	37
6.2	Financial factors.....	38
6.3	Technical factors	38
7	Selected bio-based polymer families – limitations, challenges and chances in Asia-Pacific ...39	
7.1	Polylactic acid (PLA), lactic acid (LA) and lactides	39
7.1.1	South Korea (SK)	40
7.1.2	China	40
7.1.3	Taiwan.....	41
7.1.4	Japan.....	41
7.1.5	Thailand.....	42
7.1.6	Malaysia and Indonesia.....	42
7.2	Polybutylene succinate (PBS(X))	42
7.3	Bio-based polyethylene (PE)/Bio-based polyethylene terephthalate (PET), MEG, ethylene.....	43
7.4	Polyhydroxyalkanoates (PHAs)	45
7.5	Polyamides (PA)	45
8	Case Study: The National Bioplastics Roadmap in Thailand – Situation and outlook after 8 years in operation	46
9	List of figures	49
10	List of tables	50
11	List of acronyms	51

9 List of figures

Figure 1: WTI Oil price development from 2012–2016 (Source: US Energy Information Administration 2016).....	4
Figure 2: Value chain from PLA/PBS plants (in millions of euros), based on Thailand data (PTT/National Agency 2013, Thailand)	5
Figure 3: Asian production capacities shares for selected bio-based polymers from 2014 to 2021 (nova-Institute 2015, 2016)	6
Figure 4: Selected bio-based polymer groups in Asia – CAGR in % versus value in bn US\$ 2016–2025	7
Figure 5: Shares of selected biodegradable and non-biodegradable polymers in Asia in 2021 (nova-Institute 2016)	9
Figure 6: Figure 6: Number of expected bio-based polymer plants worldwide in 2021(nova-Institute 2016)	11
Figure 7: Market potentials for succinic acid and derivatives (adapted from Weastra 2013).....	14
Figure 8: Production of bio-based MEG (adapted from Sanjeev Gurvara, Indian Glycols 2016)	15
Figure 9: Policy directions for bio-based chemicals (Baltus, National Innovation Agency (NIA) 2014)	15
Figure 10: Possible pathways to bio-based chemicals and bio-based polymers in Thailand/ Current bio-based industrial production = \$4 billion (Innobioplast 2016, PTIT, Dr. Siri Jiripongphan)	16
Figure 11: Existing biorefineries – example from Thailand (Gheewala, KMUTT 2012)	17
Figure 12: Bioindustry hub and super cluster in Thailand (Innobioplast 2016, PTIT, Dr. Siri Jiripongphan)	17
Figure 13: Biotech parks in Malaysia (Baltus 2016).....	18
Figure 14: Biomass residues available in South-East Asia (Baltus, NIA, Government data 2014)	19
Figure 15: Availability of selected feedstock in Thailand (Baltus, NIA 2014)	19
Figure 16: Real GDP growth in selected countries 2013–2016 (PTIT, Kresearch Forecast 2016)	21
Figure 17: Municipal waste generation in selected Asia-Pacific countries in 2025. Size of bubble = population size (Baltus, NIA 2011, adapted from different sources)	21
Figure 18: Plastic consumption per capita in selected Asia-Pacific countries versus Gross National Income (GNI) per capita in 2010. Size of bubble = population size (Baltus, NIA 2011, adapted from different sources).....	22
Figure 19: Benchmarking of different feedstocks for PLA in Thailand (Baltus, NIA 2011).....	23
Figure 20: Available biomass simulation (based on APEC 2008)	24
Figure 21: Value chain of PLA compared for different biomass input (Baltus, NIA 2008).....	24
Figure 22: Sugarcane price development 1980 – 2016 in Thailand (Baltus, NIA 2016).....	25
Figure 23: Products from sugarcane (Baltus 2016).....	26
Figure 24: Sugar beet production regions (USDA, FPT Securities Vietnam, Sugar Industry report 2014)	27
Figure 25: Prices of Thai domestic cassava compared to crude oil prices (Baltus 2016)	28
Figure 26: Tapioca starch prices in Thailand 2006 – 2016 (adapted from Thai Tapioca Association, NIA 2016)	29
Figure 27: The Chinese corn belt (USDA 2013)	29
Figure 28: World corn production in 2015/2016 (USDA, FAS Grain, 2016)	30
Figure 29: Oil palm tree, parts and milling products/by-products (Baltus 2016, adapted from Sime Darby 2016).....	31
Figure 30: Potential speciality chemicals from the palm oil refining process (adapted from KPMG 2016)	32

Figure 31: Cellulosic content of selected biomass (Baltus, NIA 2014)	33
Figure 32: Bio-based products from Napier grass processing (Baltus, Feasibility alternative feedstock South-East Asia, 2015)	34
Figure 33: Potential bio-based products from rubber tree (Baltus, Feasibility alternative feedstock South-East Asia, 2015)	34
Figure 34: NatureWorks dominates the PLA market (Baltus, NIA 2016).....	39
Figure 35: Petro-based ethylene prices and bio-based ethylene price projections (Irena 2012)	44
Figure 36: Present PET value chain (Baltus, NIA 2012)	45

10 List of tables

Table 1: Global and Asian production capacities including Asian shares of selected bio-based polymers in 2016 (nova-Institute 2016).....	7
Table 2: Global and Asian production capacities of selected bio-based polymers in 2021 (nova-Institute 2015, 2016)	8
Table 3: Global and Asian production capacities including Asian shares of biodegradable polymers in 2021 (nova-Institute 2016).....	9
Table 4: Production capacities for selected bio-based building blocks in 2021 (nova-Institute 2016)	16
Table 5: GDP (PPP), population, GDP per capita and stage of development for selected countries in Asia-Pacific 2015 (Worldbank 2016)	20
Table 6: Available feedstock in Asian regions (Baltus, NIA 2012, adapted from FAO).....	23
Table 7: Sugarcane production and yields for selected countries 2015/2016 (Baltus, 2016, adapted from different sources).....	25
Table 8: Main regions of cassava production, total production and yield per hectare in 2015(different sources, adapted from NIA 2012/2015).....	28
Table 9: Carbohydrate and lignin content of oil palm (Baltus 2016, Sime Darby, different sources from Malaysia, 2015).....	31
